

CRAZ MONITORING WORKSHOP

The impact of air pollution on human health and vegetation has become a major source of concern over the past several years. The quality of air, water, and soil directly and indirectly impacts human health. As such, air quality monitoring plays an integral part in determining the quality of existing air as well as enabling the management efforts for the future air quality challenges.

CRAZ is thrilled to organize a two-day Monitoring Workshop. This workshop aims to emphasize the importance of air quality monitoring topics such as: why monitor; what and how to monitor; stack emission testing; and what next with monitored data.

Presenters at the workshop will include environmental experts, regulators, and human health risk experts. Stay tuned for the workshop agenda and brief biographies of the presenters.

WHEN October 7 (8:30-3) & October 8 (8:30-4)

WHERE University of Calgary, MacEwan Centre
